

# The Complete Storage and Backup Solution

## EMC VNX and Data Domain Bundle

The EMC VNXe 3100 Unified Storage and the EMC Data Domain DD160 Deduplication Storage System will help you build the foundation for your next-generation IT infrastructure.

The VNXe series redefines networked storage for the small business to medium enterprise. This unified, single platform can provision hundreds of Exchange mailboxes in a few clicks, is optimized for VMware and Hyper-V virtualized applications and centralizes management to make administration simple.

Combine VNXe with the high-speed, deduplication disk backup of Data Domain systems, and you can save significant physical storage capacity by substituting small references for each redundant sequence, enabling cost-efficient retention on disk for fast, reliable recoveries. Backup data can be reduced in size by an average of 10 to 30 times!

## Storage and Backup Consolidation Bundle

- VNXe3100- 6TB
- 6x 1T0 NL-SAS & 3 Years Maintenance
- DD160- 3.5TB
- Boost /Replication Software & 3 Years Maintenance
