

## Platform Efficiency Assessment

Learn how to unlock the savings associated with a green server platform.

The Softchoice Platform Efficiency Assessment service provides a complete picture of the savings you can recognize through adopting eco-friendly server technology. We assess your entire server environment, regardless of platform and clearly outline the financial benefits and ROI associated with moving to the Proliant G6 platform, a more environmentally friendly platform than the rest of the industry.

### A Platform Efficiency Assessment Provides you

A full understanding of the costs associated with the power and cooling of your current environment versus a platform that can save you up to 70% on those same costs

- Help you understand the power you need vs what you're using/paying for
- An easy to understand report and ROI analysis
- A clear path to savings that can be unlocked with the Proliant G6 server line

### Key Activities

- Introductory meeting
- Softchoice Ping Installation (if needed)
- Gather information on current server environment
- Assess information and create analysis and report
- Presentation of findings and ROI analysis

### Deliverables

- Full power profile of current environment
- Tailored results to your utility profile (Internal vs Co-location)
- Costs associated with infrastructure replacement
- Full ROI analysis and clear payback period on investment

### Requirements and notes:

Client must agree to standard terms surrounding the Softchoice TechCheck Service, or be willing to provide manual information requested on server environment
