

SAN/iQ

Remote Office Solution Pack

AT A GLANCE

LeftHand SAN/iQ® Solution Packs are designed to optimize your LeftHand SAN for specific environments.

For IT departments struggling to manage isolated islands of data at remote sites, LeftHand's Remote Office Solution Pack extends your LeftHand SAN to remote and branch offices for corporate-wide, cost-effective disaster recovery. Taking advantage of the latest virtualization technology, this software lets you manage all of your company's stored data from a single console through a simple, user-friendly interface. The Remote Office Solution Pack is certified with VMware's Site Recovery Manager, delivering efficient, affordable SAN replication without the purchase of additional hardware.

SIMPLE, AFFORDABLE DISASTER RECOVERY FOR REMOTE SITES

For years, IT organizations have implemented highly available LeftHand SANs to protect critical business data in enterprise data centers. Now you can get the same protection for more isolated corporate data.

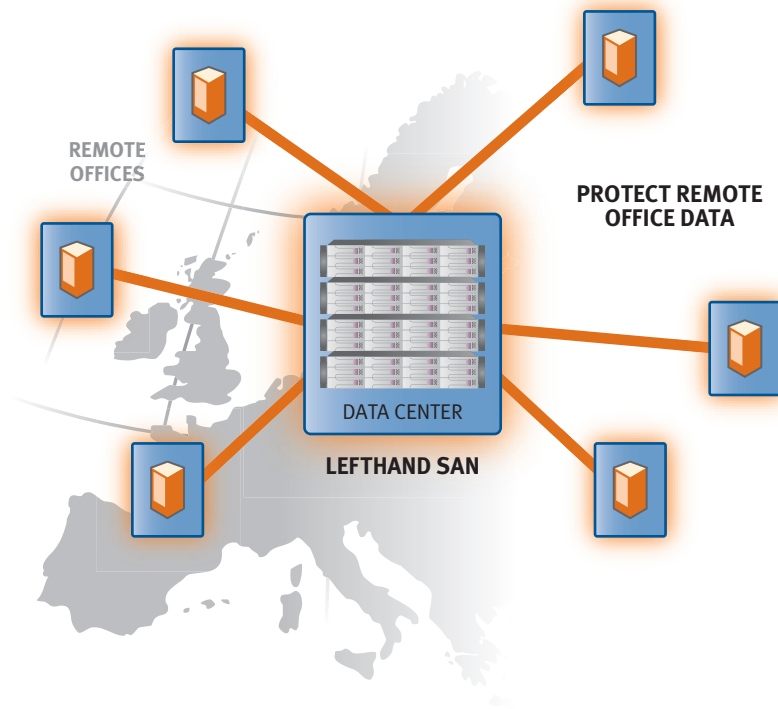

Implementing disaster recovery and consolidating backups at remote and branch offices can be a costly, complicated operation, but not with a LeftHand SAN. LeftHand Networks has a solution that requires no additional hardware, and is simple to deploy, manage and maintain: the SAN/iQ® Remote Office Solution Pack.

This cost-effective software extends your LeftHand SAN's disaster recovery capabilities to remote locations, making it easy to manage storage in branch offices from a central console in the data center.

EXTEND YOUR SAN WITH VIRTUALIZATION TECHNOLOGY

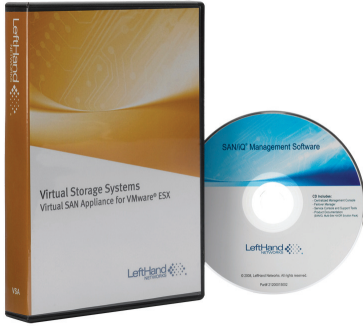

SAN/iQ software leverages your existing SAN to build virtual storage using the latest virtualization technology and the idle capacity on your existing servers. Created for remote and branch offices, this software extends any LeftHand SAN to geographically dispersed locations.

Even the most remote reaches of your business can be tied into your LeftHand SAN without the purchase of additional hardware. From a central office, you can protect and manage data collected onboard ships, on oil rigs, or in distant scientific outposts around the world as easily as you protect it at headquarters.

Install the LeftHand Networks Remote Office Solution Pack at each of your branch offices and replicate data between the data center and remote sites.

Data protection increases between the sites, because data stays online even in the event of a server failure. What's more, data volumes in the remote office can be used to replicate back to a LeftHand SAN at the data center for disaster recovery.

SAN/iQ Solution Packs are included with every LeftHand SAN.

Many IT administrators are recognizing that the benefits of virtualization aren't limited to the data center. Virtualization for storage enables companies to do more with less at every location, while at the same time providing business-critical disaster recovery solutions for remote and branch offices. LeftHand takes virtualized storage one step further, with software that is cost-effective, easy to install and easy to use, keeping your data always available across your organization.

SYSTEM REQUIREMENTS

LeftHand SAN (any configuration of storage nodes)
SAN/iQ 7.0 or higher
VMware ESX at Remote Office

CENTRALIZED MANAGEMENT MAKES IT SIMPLE

Implement LeftHand's Remote Office Solution Pack at your remote locations, and you can:

- Manage your entire SAN from a single site
- Simplify backups by consolidating data into fewer virtual pools
- Eliminate the need for third party data storage software at branch offices
- Lose the headaches and cost associated with managing remote hardware
- Keep data synchronized between central data center and remote locations

ABOUT LEFTHAND NETWORKS

At LeftHand Networks, we deliver physical and virtual SANs that are easy-to-install, easy-to-manage and designed to perform optimally in today's global data centers. LeftHand Networks pioneered IP-based SANs in 2001, and its innovative SAN products are engineered to deliver the highest availability and scalable performance, with integrated enterprise-class features.
