# Control Security Risks While Enabling Educators

The three key challenges for IT and security teams in education establishments are how to control the use of the following, without having to shut off online services that can be extremely useful to both educators and students:

- Proxy avoidance
- Social networking sites
- YouTube

The Websense® V10000™ Web Security Gateway appliance can offer a real solution to these concerns, providing visibility and control over dynamic content, as and when it is requested by the end-user.

### Websense V10000 Appliance

The Websense V10000 Web security gateway appliance platform is the industry's most accurate and effective solution for Web 2.0 content control and threat protection, enabling organizations to accelerate business without having to worry about security, productivity, and liability threats such as malicious and inappropriate content and data loss. Utilizing a hardened operating system optimized for analyzing Web traffic and content, the Websense V10000 appliance meets the performance requirements of high-throughput enterprise networks.

The Websense V10000 appliance provides lower cost of ownership by minimizing the amount of hardware required to deploy and manage a secure Web gateway and by delivering unparalleled price performance. The Websense V10000 appliance helps organizations reduce capital and operating costs, including space, power, management, and maintenance.

## Proxy Avoidance

### Problem

Challenges arising with updating new proxy avoidance sites. Students setting up their own private servers or using SSL encryption to circumvent detection.

### Solution

The Websense V10000 appliance can identify proxy avoidance sites, even private sites, newborn sites, or those using encryption, in real-time, and can stop students from accessing them.

## Social Networking

### Problem

Difficulty in striking a balance between educator requests for social networking and IT concerns about managing risk.

### Solution

The Websense V10000 appliance allows schools to say YES! to Facebook and other social networking sites by identifying and blocking inappropriate and malicious dynamic content while allowing the appropriate content to be accessed.

## YouTube

### Problem

Concerns about the risks associated with YouTube; resources unnecessarily allocated to manually controlling who can access what content as educators request it.

### Solution

The Websense V10000 appliance provides the ability to filter malicious and inappropriate content embedded within YouTube videos, allowing users to reap the benefits of this educational tool.

## The Websense Web Security Gateway offers:

- Visibility and control over dynamic Web content and outbound data loss, including SSL encrypted traffic
- Protection against Web 2.0 threats such as dynamic scripts
- Advanced protocol and application controls for IM, P2P, and more
- Leading price and performance
- Easy-to-use, centralized management and granular reporting
- Integrated Web proxy and caching
- Built-in extensibility for future-proofed security
