

# Multi-OEM Solution

 POWERED BY INTEGRA

Legrand brings real data center solutions to your increasing challenges of modern data center infrastructure. With the use of multi-code prompts, Legrand has created an array of multi-OEM options that work with three of the top OEM providers – Cisco®, Juniper® and Arista®. These transceivers, powered by Integra, have been coded and tested to work across 100G QSFP28 over LR4 distances.

- Lifetime warranty
- Customization available
- Compatible across multiple networks and telecommunication brands

- Single source: 1 transceiver = 3 compatible vendors
- Eliminates the need for multiple transceivers that add to complex problems for your data center team
- Reduce your stock holding

# Breaking barriers in today's competitive multi-OEM environments

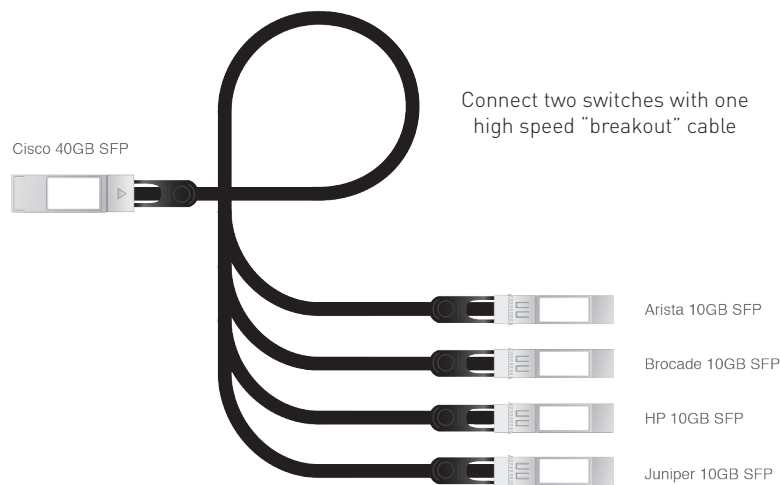

End users from data centers to corporate and financial institutions rarely partner with a single system OEM. The use of Legrand DAC cables allows you to seamlessly connect from Arista to Cisco, Cisco to Juniper, Juniper to Cisco or any other mix of OEM configurations—borderless connectivity. Available in all lengths, both passive and active as well as custom lengths.

- Lifetime warranty
- Solutions for both optical and copper
- Customization available
