Simple, Enterprise-Grade Collaboration

Challenge

It seems like the market is suddenly flooded with collaboration software, making it difficult to know which to choose. What's an easy, yet enterprise-quality, solution compatible with ViewSonic® ViewBoard® interactive flat panel displays?

Solution

The simplest enterprise-grade collaboration solution is available as a free download for every ViewSonic ViewBoard and can also be used with other interactive displays. In addition to enabling easy, intuitive annotation and whiteboarding capabilities, myViewBoard™ for Windows® software delivers secure screen sharing via the ViewSonic myviewboard.com cloud service.

Bidirectional capabilities ensure easy, across-the-globe teamwork. Content displayed on your meeting room ViewBoard can be seen by an unlimited number of participants in any location. This includes all real-time edits, drawings or other annotations made during your meeting. Participants can likewise cast their own screens to the conference room ViewBoard, enabling efficient collaboration among those seated around your conference table – or anywhere else in the world.

Enterprise security is safeguarded with advanced AES-256 encryption, the standard for healthcare and banking data. Password-protected login further protects data from unauthorized access. Housed on AWS secure servers, myViewBoard for Windows delivers a highly safe and secure user experience.

The proprietary cloud save feature lets users save and retrieve documents and images directly on a shared cloud drive such as Dropbox, Google Drive and OneDrive. Anywhere annotation enables whiteboarding over or alongside any application, existing content, or web browser.

What you'll need for easy interactive display collaboration:

▸ **A ViewSonic® ViewBoard® Interactive Flat Panel Display (or other interactive display)**

and

▸ **User PC, Mac or Chromebook devices**

both

▸ **Running Chrome browsers**
