Softchoice Security Consolidation Assessment

Softchoice's Security Consolidation Assessment is ideal for clients who want to analyze the components of their existing security infrastructure to find cost-efficiencies and improve their overall security posture. Our goal is help you evaluate alternative options and migration paths and achieve greater simplicity by consolidating security requirements with best-of-breed technologies that are the right fit for your business. The Assessment is designed to arm IT professionals with a portrait of their current state along with recommendations to save money and improve overall security.

Phase	Client Benefits
Discovery	• Softchoice's Security Architects evaluate your security environment and consolidate this often broad set of data to identify potential risk and options.
Analysis	• We provide a view of infrastructure that may be vulnerable to known security risks.
Recommendation	• Working with the data and a view to future requirements, we work with you to build a roadmap and make recommendation sbased on proven best practices.

A Changing Landscape

Protecting against security threats has become a more challenging endeavor. We believe managing multiple security vendors only increases security risk while compromising the ability of organizations to protect their data and users as new threats emerge.

Why Softchoice?

Solutions Architects with 15+ years of experience: we help you break down silos and design and implement a holistic solution for your security needs.

Over 1000 implementations in North America: we're vendor agnostic and have helped hundreds of clients plan, deploy, adopt, and operate best-in-class security solutions.
