

Softchoice Security Solutions

Mitigating risk, allowing you to focus on growth and innovation

The Softchoice difference

Our goal is to help you select and implement the right data protection strategy for your organization. We believe in an assessment-led approach that first identifies what you need to protect, and then qualifies and quantifies your data protection risks and opportunities.

With an accurate assessment of your current security posture, you'll leverage our Security Architects to take a vendor agnostic approach to designing the optimal solution. This approach typically results in cost savings of 40 to 60 percent. Softchoice partners with every major security vendor, so we have no bias as to what will work best for your IT environment.

Softchoice has Security Architects in all the other major technology categories – including client computing, datacenter, and cloud – who work together to design integrated solutions. This is different from other security providers who aim to sell specific technologies and often miss the bigger picture.

At Softchoice, the only thing that matters is making your environment more secure.

Assessment-Led

We start with a snapshot of your current IT environment, identify your security needs, and design an integrated solution that bridges the gap.

Top Vendors

We use our industry-best vendor partner network to implement agnostic solutions based on your needs and your budget.

Integrated Solutions

We design integrated solutions that protect everything you use to create, store and share your work, including: client computing, the datacenter, and cloud.

Our Assessments

From health checks to vulnerability and compliance reviews, Softchoice offers a complete repertoire of security assessments that ensure we start to design your security solution from the right place

Network Vulnerability Assessments

Our engineers scan your IP ranges to identify network-based vulnerabilities that hackers may take advantage of in your network.

Web Application Vulnerability Assessments

As the weakest link in network security, our specialists assess your websites for vulnerabilities within the code itself.

Malicious Activity Assessments

Using the latest technology, Softchoice detects threats that are already in your network.

Data Loss Prevention Assessments

We identify your critical data, establish where it goes, and who accesses it.

Mobility TechCheck

We determine how many mobile devices are connecting to your environment, and the devices and data being used.

SaaS TechCheck

Find out which Software-as-a-Service applications are in your environment, including those for cloud storage, file sharing, and remote access.

Security TechCheck

Part of our IT Asset Management assessment, we determine the software installed on your devices and correlate vulnerabilities with them.
