

Visibility & Auditability with BetterCloud

CURRENT CHALLENGES FOR IT TEAMS

The promise of SaaS involves a world in which the digital workplace is comprised of dozens, even hundreds of applications. In this world, it is virtually impossible to get full visibility into assets or to understand the interactions taking place between them. Which users belong to which groups? What settings are administrators changing? Who is sharing files with external third parties? This lack of visibility not only blinds IT teams to the risks that exist, it also makes it impossible to mitigate those risks.

And for organizations that have merged with or acquired companies, this challenge grows exponentially as every company has their own instances of applications and there's no clear way to manage users or see the data and interactions taking place across instances of the same application.

HOW CAN ORGANIZATIONS SOLVE THESE CHALLENGES?

By centralizing the data and administrator controls into a single platform, BetterCloud makes it easier to visualize all the assets and users across SaaS applications and audit administrator activity.

Unify SaaS applications, including multiple instances of a single application, for a single view of users, groups, and files. By giving IT teams visibility into applications, BetterCloud helps surface critical insights, like how data is shared with people outside the organization and user settings across different applications.

Since administrator controls are delegated and managed through BetterCloud, IT teams get a comprehensive view of all administrator actions taken across applications, making it easier to identify rogue administrators and their actions.

CUSTOMER SPOTLIGHT

“BetterCloud ensures that when we need to take action on something, all of the relevant information is available in one place.”

Alex LaBrosse, IT Manager

Visibility & Auditability with BetterCloud

WHY BETTERCLOUD IS THE BEST OPTION FOR VISIBILITY & AUDITABILITY

Using BetterCloud, IT teams enhance their SaaS application insights and are better equipped to manage the company's risk of a serious security threat. BetterCloud is the only platform to centralize data across applications and multiple instances, and give IT teams the control to take action from the same console.

CUSTOMER SPOTLIGHT

globalpayments

“BetterCloud helps smooth out the friction that will often accompany an acquisition.”

Michael Weir,
Director of Operations

Enhanced Insights

Unify SaaS applications for a single view of users, groups, and files.

Manage Company Risk

Audit activity and easily pull reports needed for regulatory compliance

BETTERCLOUD IS THE EXPERT IN THIS SPACE

5 Billion

Files Secured

&

1 Million

Added Each Day

BetterCloud customers add 1700+ files/day and update 1800+ files/day

8% of these files are shared externally.

Without BetterCloud, it would be nearly impossible for our customers to manage and secure the 400M+ files they have shared outside their organization.
