

WELCOME TO THE PATIENT CARE REVOLUTION.

Honeywell

PATIENT CARE THAT DOESN'T LOSE SIGHT OF THE PATIENT.

Today's healthcare consumers are more active participants in their care than ever before. Technology makes it easier for clinical care providers to adapt and deliver what this new breed of patient demands, empowering your organization with robust tools to manage patient data flawlessly and automate workflows to reduce the risk of errors. Technology solutions can help you achieve seamless operational efficiency, lower your operating costs, and see improved reliability from your IT infrastructure. Put patient care at the center of your technology strategy, never losing sight of its purpose: better quality of care.

MOBILE HEALTH IS ON THE MOVE.

Patients have been increasingly harnessing the power of mobile connectivity for access to care information and are now more connected to their healthcare providers than ever before. Equipping clinicians and healthcare staff with mobile technology enables healthcare providers to monitor, document and communicate with simplicity and precision to deliver accurate, efficient and quality patient care with much greater efficacy. Having the right solutions in place can streamline error-prone tasks like patient identification, point-of-care medication delivery, or specimen collection.

PHYSICIANS SPEND AN AVERAGE OF

43% of their time on data entry, but only **28%** of their time on direct patient contact.¹

NURSES SPEND

33% of their time interacting with technology, but only **16%** on patient interaction.²

IMPROVING PATIENT OUTCOMES WITH SATISFACTION IN MIND.

| 38% of healthcare providers believe a top priority for patients is quick and convenient service from their healthcare providers.³

While the healthcare landscape is changing in so many ways, patient satisfaction is absolutely paramount. Patients now have a stronger voice in the process. Measurements of patient satisfaction such as HCAHPS have helped place a new emphasis on the patient experience, and communication is a key metric. Technology that improves communication between the care team and ensures access to real-time information can help hospitals deliver the superior patient experience that they are striving for.

CRITICAL PATIENT DATA AT THE CAREGIVER'S FINGERTIPS.

High-performance mobility technology for healthcare invites care-team collaboration and improves patient experience and patient outcomes. Enhanced data collection including patient-reported data may help researchers and clinicians uncover patterns that would otherwise remain hidden, leading to new ways of predicting, diagnosing, managing and treating health conditions. Streamlined communication with patients and across the care team can lead directly to improvements in the quality of patient care.

KEEPING PACE WITH THE SHIFT TO PROACTIVE CARE.

Patients today expect a 24/7, two-way dialogue with their providers. With access to rich patient data, providers can make proactive decisions to identify the patient's needs with statistical precision. With better technology solutions for managing the influx of patient information, data can be more readily converted to actionable insights, empowering clinicians to make the best care decisions together with their patients.

TECH THAT REMOVES LAYERS.

In today's climate, failing to meet patients' expectations is increasingly costly. The good news is, the smallest changes can make the biggest difference. Improved organizational agility, communication and data efficiency are now standard requirements for organizations that want to stay competitive and drive modernization to keep up with customers' demands. Because after all, the more engaged healthcare clinicians and staff are, the more satisfied their patients are with their experience.

THE FUTURE OF BETTER CLINICAL CARE IS MOBILITY.

Mobile is revolutionizing patient care and driving efficiencies across all areas of healthcare. Creating a successful clinical mobility strategy requires a forward-thinking approach that focuses on improving patient outcomes while accounting for future technology advancements, and considering seamless integration with existing IT investments. With the transition toward patient-centered care models, leading hospitals are increasingly investing in mobile communication solutions in order to improve care quality and outcomes, reduce healthcare delivery costs and increase patient and provider satisfaction. Mobile solutions enable EHR compliance and care-team communications to help deliver optimal care to all patients.

IT'S OUR JOB TO MAKE YOUR JOB EASIER.

At Honeywell, we are hyper-focused on helping you provide high-quality patient care and supporting you in your patient-centered approach. This includes the latest technology that is purpose-built for the clinical environment. Together, with our strong partnerships with leaders in healthcare, we're facilitating an ongoing technology evolution and redefining what's possible for healthcare organizations of all shapes and sizes. We believe the smartest technology knows how to stay out of your way, so you can focus on what's most important – delivering the best-in-class care your patients expect.

To learn how we can help transform your patient care through the latest technology solutions, contact a Honeywell representative at **800-537-6945** or visit **<https://hwl.co/healthcare>**
