

Samsung Remote Management Solution

Combine your Content Management System (CMS) with Samsung for complete device control

Hardware control

- Control critical display settings, anywhere, anytime
- Intuitive interface just like being in front of the display

Strong monitoring

- Real-time, proactive display and content monitoring
- Identify and receive guidance on how to resolve display errors

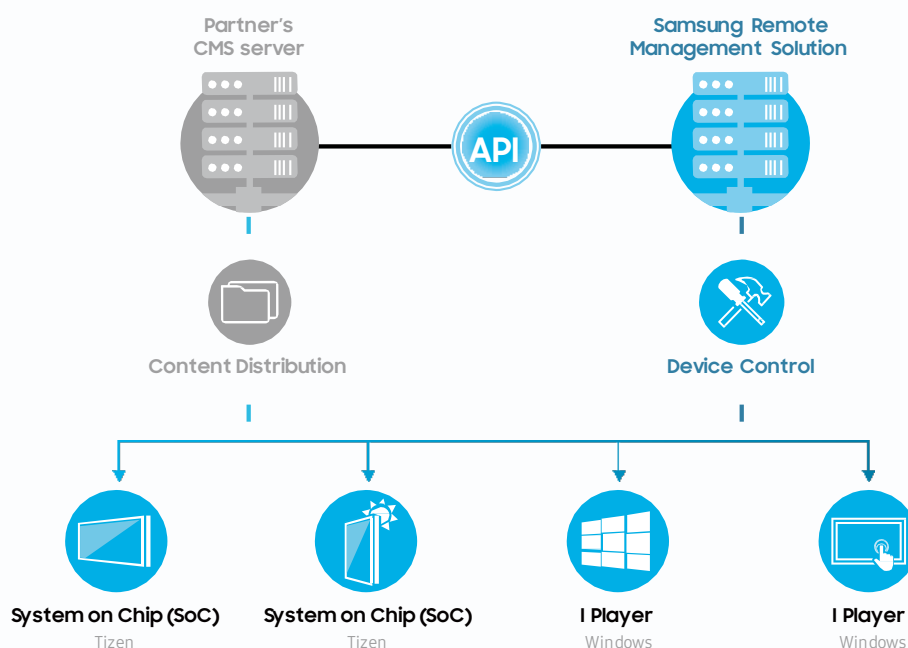

Custom management

- Customizable device management
- Save time and money with installation and setup

Why choose the Samsung Remote Management Solution?

Whether your business has its own content management solution or web application, the Samsung Remote Management Solution is the answer to help ensure your devices and displays are meeting business needs. Samsung Remote Management Solution is a central remote service solution allowing remote monitoring of devices and eliminating the need for site visits or service calls. The Remote Management Solution platform synchronizes with a businesses' existing customer relationship management software and provides a complete overview of hardware and display content. The Samsung Remote Management Solution is included with the MagicINFO™ Server installation package, however a separate license key is required.

Hardware control

As the premium hardware control solution powered by a market leader, the Remote Management Solution provides access to critical display settings from anywhere. The intuitive mirroring interface allows users to adjust settings as though users were standing in front of the display. The ability to control the on-screen display remotely, push new firmware and automate software updates eliminates the need for onsite or engineering visits.

Direct Remote Control

Remotely control all on-screen display menus as if you are in front of the display, using a mouse and keyboard.

Device Setting Control

Adjust critical hardware settings including power, volume control, input source, picture mode and time, among others.

Quick Control

Access quick control panel for frequently used settings.

Web Browser Control

Control web browser settings such as homepage, moving URLs, zoom ratio and refresh intervals.

Advanced Security Control

Control all security settings including network port access, USB navigation, Wi-Fi and Bluetooth connection, as well as the smart download feature based on company's security policy.

Remote Software update

Manage display firmware versions. Users can also register or publish new firmware for their displays.

Strong monitoring

The Samsung Remote Management Solution includes a display monitoring dashboard with device details such as screen activity and content. The solution also provides real-time, proactive monitoring. In the case of a system malfunction, users receive an automatic email notification with an overview of the error. The platform also shares device statistics, data on error rates, connection status and approval as well as information on how to diagnose and fix various potential hardware and software errors.

Error Detection

View information on more than 130 hardware and software errors and details to diagnose a device problem on the user's network.

Error Code Guide

Receive an error code from the server detailing the issue and providing guidance on how to resolve the error remotely using the Web Manual.

Mobile Access

Access the Remote Management server at any time, regardless of location via mobile.

Device Statistics

Review device summary information such as error occurrence, connection history and approval status.

Custom management

Remote Management is a completely customizable solution, offering many advanced benefits to emphasize users' brands and help reduce operational burden. Users can add an image or video file as a custom logo on the display as devices power on to showcase a specific brand or business. The solution also supports device group code and presets, which allow partners to save a device's initial settings and configuration values, saving time and money associated with installation and setup.

Display Customized Logo

Display a customized logo as a device turns on via Remote Management to help ensure brand visibility.

Device Group Code

Save time spent on initial setting recognition with automatic device grouping using device group codes.

Advanced Device Preset

Improve setup by setting automatic configuration values, default content and even custom logos using device preset codes.

Default Content

Set custom default content to be played by default on the display when there is nothing else scheduled.

System Requirements

Hardware	CPU: Dual Core 2.5 GHz or greater
	RAM: 2048 MB or greater
	HDD: 200 GB or greater
Software	Internet Explorer10/11
	Chrome

* Note: Some features may not be fully implemented when running with Internet Explorer 11 on a Windows Server OS.

System	Windows Server2008
	Windows 8 Professional
	Windows Server2012
	Windows10 Professional
	Windows Server2016
